

Computer Architecture

Some questions & answers

Prof. Nizamettin AYDIN, PhD
naydin@yildiz.edu.tr

<http://www3.yildiz.edu.tr/~naydin>

Q25

- List three broad classifications of external (or peripheral) devices.

- **Human readable:**

- Suitable for communicating with the computer user.

- **Machine readable:**

- Suitable for communicating with equipment.

- **Communication:**

- Suitable for communicating with remote devices

Q26

- Given $x = 0101$ and $y = 1010$ in 2s complement notation (i.e., $x = 5$, $y = -6$), compute the product $p = x \times y$ with Booth's algorithm.

A26

<u>A</u>	<u>Q</u>	<u>M</u>	
Initialization: $Q_3Q_2Q_1Q_0$ Q_{-1}			
<u>0000</u>	<u>1010</u>	<u>0</u>	<u>0101</u> Initial values
1 st cycle:			
<u>0000</u>	<u>0101</u>	<u>0</u>	<u>0101</u> AShiftr
2 nd cycle:			
1011	0101	0	0101 $A \square A - M$
<u>1101</u>	<u>1010</u>	<u>1</u>	<u>0101</u> AShiftr
3 rd cycle:			
0010	1010	1	0101 $A \square A + M$
<u>0001</u>	<u>0101</u>	<u>0</u>	<u>0101</u> AShiftr
4 th cycle:			
1100	0101	0	0101 $A \square A - M$
<u>1110</u>	<u>0010</u>	<u>1</u>	<u>0101</u> AShiftr

Result is in A and Q

Q27

- Given $x = 1001$ and $y = 0010$ in twos complement notation (i.e., $x = -7$, $y = 3$), compute the division $p = x / y$.

A27

Accumulator

$A_3 A_2 A_1 A_0$

1111

1st cycle:

1111

0010

1111

2nd cycle:

1110

0001

1110

3rd cycle:

1100

1111

1111

4th cycle:

1111

0010

1111

Quotient

$Q_3 Q_2 Q_1 Q_0$

1001

0011

0011

Divident is in A and Q

Initial values

LShiftl

$A \leftarrow A + M$ (if $A_3 \neq M_3$)

Restore A, $Q_0 \leftarrow 0$ (if $A \neq 0$)

LShiftl

$A \leftarrow A + M$ (if $A_3 \neq M_3$)

Restore A, $Q_0 \leftarrow 0$ (if $A \neq 0$)

LShiftl

$A \leftarrow A + M$ (if $A_3 \neq M_3$)

$Q_0 \leftarrow 1$ (if $A_{3a} = A_{3b}$)

LShiftl

$A \leftarrow A + M$ (if $A_3 \neq M_3$)

Restore A, $Q_0 \leftarrow 0$ (if $A \neq 0$)

Remainder is in A and quotient in Q

Q28

- In a computer system, address 100 contains decimal value 32, address 200 contains decimal value 10.
- What would be the contents of accumulator after running the following assembler code.
- Explain what happens.
 - LOAD 100
 - SHIFTR
 - SHIFTR
 - ADD 200

A28

- If address 100 contains 32, address 200 contains 10:

<u>Instruction</u>	<u>Acc. Content</u>	<u>Operation</u>
LOAD 100	A=32	$A \leftarrow M(100)$
SHIFTR	A=16	$A \leftarrow A/2$
SHIFTR	A=8	$A \leftarrow A/2$
ADD 200	A=18	$A \leftarrow A+M(200)$

Q29

- In a computer system, a small part of memory is given in the following table. What would be the contents of accumulator after running the following assembler code. (All values are in hexadecimal).

Mem. Adress	Data
A0	A4
A1	A3
A2	22
A3	3A
A4	A1

- LOAD IMMEDIATE A1
- RROTATE
- ADD INDIRECT A4
- AND IMMEDIATE EA
- SUB DIRECT A2
- SHIFTL

A29

LOAD IMMEDIATE A1 $\text{Acc} = (1010\ 0001)_2 = (\text{A1})_{16}$

RROTATE $\text{Acc} = (1101\ 0000)_2 = (\text{D0})_{16}$

ADD INDIRECT A4 $\text{Acc} = (1101\ 0000 + 1010\ 0011)_2$
 $= (0111\ 0011)_2 = (73)_{16}$

AND IMMEDIATE EA $\text{Acc} = (0111\ 0011 \text{ AND } 1110\ 1010)_2$
 $= (0110\ 0010)_2 = (62)_{16}$

SUB DIRECT A2 $\text{Acc} = (0110\ 0010 - 0010\ 0010)_2$
 $= (0100\ 0000)_2 = (40)_{16}$

SHIFTL $\text{Acc} = (1000\ 0000)_2 = (80)_{16}$

Q30

Given the following memory values and a one-address machine with an accumulator, what values do the following instructions load into the accumulator?

Word 20 contains 40;

Word 30 contains 50;

Word 40 contains 60;

Word 50 contains 70;

- a. LOAD IMMEDIATE 20
- b. LOAD DIRECT 20
- c. LOAD INDIRECT 20
- d. LOAD IMMEDIATE 30
- e. LOAD DIRECT 30

A30

Word 20 contains 40; Word
30 contains 50; Word 40
contains 60; Word 50
contains 70;

- a. LOAD IMMEDIATE 20
- b. LOAD DIRECT 20
- c. LOAD INDIRECT 20
- d. LOAD IMMEDIATE 30
- e. LOAD DIRECT 30

a. 20

b. 40

c. 60

d. 30

e. 50

Q31

- If the last operation performed on a computer with an 8 bit word was an addition in which the two operands were 2 and 3, what would be the value of the following flags:
 - Carry flag
 - Zero flag
 - Overflow flag
 - Sign flag
- What if the operands were -1 (2's complement) and +1?

A31a

2 (8 bit) 00000010

3 (8 bit) 00000011
00000101

Carry = 0

Zero = 0

Overflow = 0

Sign = 0

A31b

-1 (8 bit 2s Complement)	11111111
1 (8 bit 2s Complement)	<u>00000001</u>
	1 00000000

Carry = 1

Zero = 1

Overflow = 0

Sign = 0

Q32

- Let the address stored in the program counter be designated by the symbol **X1**.
- The instruction stored in **X1** has an address part (operand reference) **X2**. The operand needed to execute the instruction is stored in the memory word with address **X3**.
- An index register contains the value **X4**.
- What is the relationship between these various quantities if the addressing mode of instruction is
 - a. direct,
 - b. indirect,
 - c. indexed,
 - d. PC relative?

A32

a. $X_3 = X_2$

b. $X_3 = (X_2)$

c. $X_3 = X_2 + X_4$

d. $X_3 = X_1 + X_2 + 1$

Q33

A PC-relative mode branch instruction is 3 bytes long. The address of instruction, in decimal, is 256028. Determine the branch target address if the signed displacement in instruction is -31.

A33

Recall that relative addressing uses the contents of the program counter, which points to the next instruction after the current instruction.

In this case, the current instruction is at decimal address 256028 and is 3 bytes long, so the PC contains 256031.

With the displacement of -31 , the effective address is 256000.
